How it Works

- Get items via CDM API
- Get metadata
- Get images

A white rabbit is shown in profile, eating a green, spiky cactus. The rabbit's mouth is open, and it is holding a piece of the cactus. The background is dark and out of focus. The text "Lessons Learned" is overlaid in white, bold font across the center of the image.

Lessons Learned

What are we learning?

Lessons around strategy

- Pros and cons of faculty-led vs. librarian-led projects
- Sustainability of outsourcing development

Lessons around technology

- CONTENTdm API performance issues
- Expect to constantly shift expectations based on what's possible within budget
- Open source software vs. open source communities

What's next?

- Allocated funding to continue to project for another year
- Priorities of the next phase include:
 - Improve performance
 - Provide support for compound objects
 - Finish “reports”
 - Make it simpler to spin up new instances of the application for other CONTENTdm collections
- If there's room...
 - Facilitate more flexible options for student engagement beyond the current “reports” feature

Thanks

Ben Daigle
